AGGREGATE. NEAREST LINE AT 69 KV OR ABOVE IN THE STATE TRANSMISSION LAYER. COMPUTED FROM 65 COMMITTED SEGMENTS. NOT A SOURCED FIGURE.

A fifth of it goes nowhere.

Koplin estimates 20 to 25 percent of Cordova's hydropower goes unused every year.

That is a share of hydropower, not of total demand, and it is an estimate rather than a metered figure.

In 2025 hydropower covered more than 83 percent of the town's electrical demand. (C19)

Over 200 island grids. One got picked.

NO SCALE.
A COUNT, NOT A MAP.

UAF counts over 200 remote microgrids in Alaska. Each one is a closed loop with nothing joining it to the next. Cordova is one of them.
(C06)

200 MARKS DRAWN

07 / 09

EACH MARK IS ONE REMOTE MICROGRID. 8 ROWS OF 25. THE CUT EDGE IS THE WORD OVER. C06

The money is not for the data center. It is for the grid.

On August 11th UAF published both. \$725,000, AURORA-AI, Alaska Utility Resilience and Optimization using Real-time AI, with Richard Wies as principal investigator. It combines utility data, virtual replicas of the power grid and AI to forecast demand and detect abnormal operating conditions. (C01, C02, C03, C05, C07)

If the power can't leave, who should get to use it?

"Alaska's isolated power systems provide an ideal environment for developing and testing next-generation technologies that can improve electric grid resilience."

RICHARD WIES, PRINCIPAL INVESTIGATOR, AURORA-AI (C09)
