WHAT PSDN-S DOES ON DECK

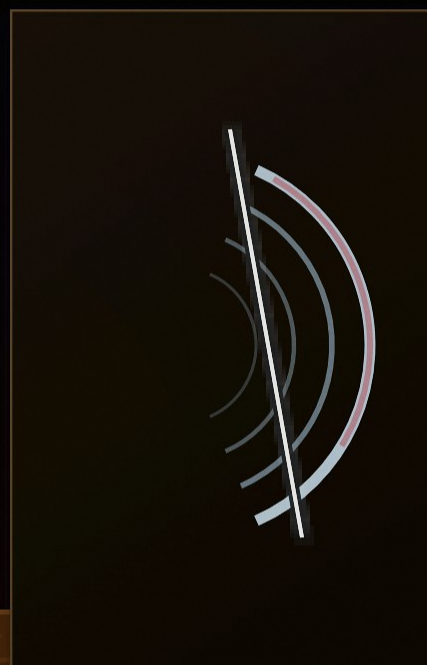

Scan. Spike. Cut. Ice. Six and a half seconds.

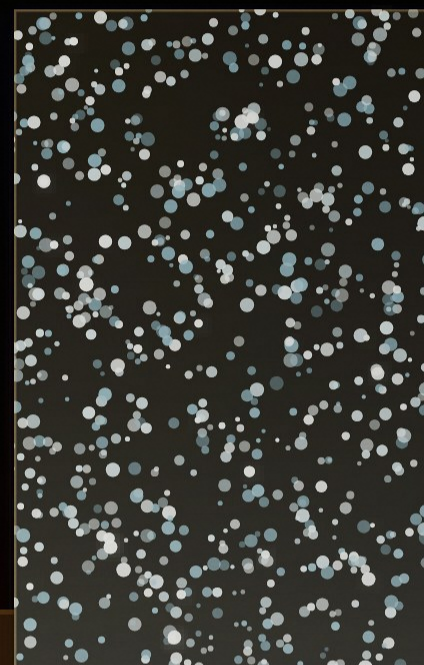

01 SCAN

02 SPIKE

03 CUT

04 ICE

6.5 s OR LESS

TOTAL, NOT PER STEP

Computer vision picks the fish and the path. A spike to the hindbrain, a cut at the gills, then into slush ice.

"We're basically doing the equivalent of surgery on these fish in a very difficult maritime environment."

Khawaja, via FISHBIO

RIGOR MORTIS, HOURS AFTER DEATH

Seven hours becomes sixty. That gap is the product.

A suffocated salmon stiffens in about seven hours. Shinkei says its process pushes that to sixty. Same fish. The only thing added is time, and it is added on an Alaska deck.

WHAT IS ACTUALLY PUBLIC

ONE LIT. NO COUNT.

More than 1,300 permits. A handful of boats.

What is not public is how many of these boats are running the robot this season.

WHAT THE FISHERMAN PAYS

The machine is free. The split is not disclosed.

"We own the machines and put them on the boats for free."

SAIF KHAWAJA, SHINKEI

"We split it variably with the fishermen we work with."

KHAWAJA, ON THE SPLIT

Nobody here is being fleeced. What is not on the record anywhere is the share, and a share you cannot see is hard to bargain over.

AMOUNT UNDISCLOSED.

WHAT GETS BUILT ON THE HOURS

The fish stays Alaskan. The asset does not.

Khawaja says the company handles and markets the fish under its own brand. The hours are made on an Alaska deck.
